Linux Basics: Navigation & Listing

Essential commands to move around and view files in Linux. A solid starting point for your cybersecurity journey.

`$ pwd`	**Show current directory** Displays the full path of your current working directory.
`$ ls`	**List directory contents** Shows the files and directories in the current directory.
`$ ls -l`	**Detailed list** Shows a detailed list with permissions, owner, size, and modification date.
`$ ls -la`	**Include hidden files** Shows all files, including hidden files that start with a dot.
`$ cd ..`	**Go up one directory** Moves to the parent directory, one level up.
`$ cd ~`	**Go to home directory** Changes to your home directory.
